

## **PRESS RELEASE**

### **SWEDISH ARMED FORCES SELECT SCHIEBEL MINE DETECTOR FOR USE IN BOSNIA**

The Swedish Armed Forces have selected, after extensive tests and trials, the latest model of the SCHIEBEL AN-19/2 Mine Detecting Set for use by their troops in Bosnia.

The Schiebel AN-19/2 Mine Detecting Set, a minimum metal mine detector, is in use in all major demining operations world-wide. The AN-19/2 is the standard mine detector for the United States Army as well as many other modern armies. Due to the equipment ruggedness, high reliability, and cost effectiveness it is the single most used equipment in humanitarian demining operations. It is used in Afghanistan, Cambodia, Mozambique, and Angola. The AN-19/2 is also used with excellent results in a number of commercial demining operations.
