U.S. military expands use of Schiebel's MIMID™ Miniature Mine Detector

Schiebel's **MIMID™** Miniature Mine Detector has officially been adopted into the U.S. Military's procurement system. The **MIMID™** is a light-weight, collapsible and waterproof detector designed for light and special forces, as well as divers.

Out of more than 2,000 sold so far, over 600 have been purchased by all branches of the U.S. Military, including Special Forces. A recent order for 290 units was placed by the U.S. Air Force, for use by its EOD teams. It was for this procurement that **MIMID™** was assigned the NSN: 6665-01-506-6219

The **MIMID™** was originally designed in conjunction with the US Army's Countermine Division, and was further tested and certified by the US Navy for Explosive Ordnance Disposal (EOD) team use. The com-

compact, straightforward design combines with superior detection capability on land or under water to make it the most flexible mine detecting device on the market.
